DETAILED ACTION

Specification

- 1. The abstract of the disclosure is objected to because: in the last line, "the retransmits" apparently should be "then re-transmits". Correction is required. See MPEP § 608.01(b).
- 2. The disclosure is objected to because of the following informalities:

Fig. 7, most notably step 760 and the specification's discussion thereof (p. 22+), is logically awkward, confusing, and apparently incorrect and/or inadequate. Step 730 as depicted in the drawing apparently only checks one received content portion, i.e. "a received content portion." Step 760 thus apparently functions to form a number of "missing content" records equal to the number of identifiers in the manifest if a single received packet identifier does not match any content identifiers in the manifest, the same "missing content" record-making process apparently being repeated (770, 780, 730) for each identifier on the manifest. Iterations through step 760 accordingly appear to compile a list of "missing content" records comprising every content identifier in the manifest for every single packet that apparently shouldn't have been received in the first place, all of which have nothing to do with processing of packets that actually should be received, i.e. packets that are consistent with the manifest.

Appropriate correction is required.

Allowable Subject Matter

- 3. Claims 68-74 are allowed.
- 4. Claims 62-65 and 78 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 5. The indicated allowability of claims 57-61, 66, 67, and 75-77 is withdrawn in view of the newly discovered reference to Dawson. Rejections based on the newly cited reference follow.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 7. Claims 57-61, 66, 67, and 75-77 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,594,490 to Dawson *et al* (hereafter "Dawson").

Dawson discloses arrangements for reliably broadcasting digital data, such as video/audio files, over a satellite to plural receiving stations, such as CATV receivers. Dawson's arrangements include receiving feedback indicative of missing packets from each of the receiving stations. As described by Dawson (col. 11, lines 4-36) the satellite broadcast medium is only used for a scheduled retransmission if a threshold number of receiving stations indicates that a particular packet is missing, otherwise lower-

Application/Control Number: 09/895,433

Art Unit: 2133

bandwidth point-to-point links may be used. Accordingly, Dawson discloses determining a subset of data indicated to be missing in the feedback received from each of the plurality of receivers based at least in part on weighing how frequently data is indicated to be missing and broadcasting the subset.

Regarding claim 58, Dawson's CATV receivers receive broadcast video, presumably comprising a "portion of a movie."

Regarding claims 59 and 75, as Dawson's receivers for performing the steps of the retransmission flowchart (Fig. 3) comprise a programmed computer (col. 9, lines 30-46). Accordingly, Dawson's arrangements apparently involve a "machine-readable medium" bearing instructions for performing the above-cited retransmission processing as an "algorithm."

Conclusion

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stephen M. Baker whose telephone number is (571) 272-3814. The examiner can normally be reached on Monday-Friday (11:00 AM - 7:30 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Albert DeCady can be reached on (571) 272-3819. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
